

Gluing Tips Using Fitz Design Flower Bracelets

Gluing can be an easy and profitable alternative to the comfort of wiring and taping. Personally, I can create a corsage on a Fitz Design Flower Bracelet using glue in about three minutes, and many designers using these techniques are able to design beautiful corsages in about five minutes. The first step is the willingness to try!!!

Throughout the floral industry there are many different designs techniques regarding corsages. A main one that I come across is to add a bow or not. With a Fitz Design Flower Bracelet, you are able to do either. To add a bow, simply make one and attach it using wire or glue.

A great problem within the industry is designers using the incorrect glue. When I began gluing I mistook plastic modeling cement as the correct glue. Many other use pan melt glue that breaks off after being in the cooler. The correct glue I use is Oasis ® Floral Adhesive. To use the glue, pour a small amount out on a disposable surface. By using the glue off a surface and not from the tube, the drying time is shortened. Remember, glue is cheap in comparison to a returned design, so use plenty.

The corsage will be created with four major components, a Fitz Design Pink Flamingo Seaglass Flower Bracelet, spray roses, filler, and greenery. First, cut the calyx flat on the first two roses to create a large surface area for the glue to adhere to. Glue the first two roses together in the middle of the Fitz Design Flower Bracelet disk.

Next, cut the second pair of roses at an angle. Glue them in a similar position as you would with wired and taped flowers.

Add the remaining roses by gluing them into the sides of the corsage. See the familiar look of a wired corsage?

For the last of the florals of the design, add filler flowers and greenery to the Fitz Design Flower Bracelet corsage. These are glued in to the areas that need a little extra to fill out the design.

Finish your design by adding Kara's Kisses and other embellishments as you see fit. Allow the glue to dry outside of the cooler, as it will not inside. Remember to use your favorite preservative on the corsage. Deliver to your customer and watch the profits grow!!!!
